Financial advisors and institutional investors: Please visit www.vanguard.com/etf or call 800-997-2798.

Vanguard ETF Shares can be bought and sold only through a broker (who will charge a commission) and cannot be redeemed with the issuing fund. The market price of Vanguard ETF Shares may be more or less than net asset value.

All ETF products are subject to stock market risk, which may result in the loss of principal. Prices of mid- and small-cap ETF products often fluctuate more than those of large-company ETF products. International ETF products involve additional risks, including currency fluctuations and the potential for adverse developments in specific countries or regions. ETF products that invest in emerging markets are generally more risky than those that invest in developed countries. Sector ETF products are subject to sector risks and nondiversification risks, which may result in daily performance fluctuations that are more extreme than fluctuations in the overall stock market. In addition, sector ETF products that sample their target indexes to comply with tax diversification rules may experience a greater degree of tracking error than other ETF products. Investments in bond ETF products are subject to interest rate, credit, and inflation risk. The Extended Duration Treasury ETF is subject to interest rate risk, which is the chance that bond prices overall will decline because of rising interest rates. Interest rate risk is expected to be extremely high for the Fund because it invests mainly in zero coupon long-term bonds, which have prices that are very sensitive to interest rate changes. Because the Fund invests mainly in Treasury strips with maturities ranging from 20 to 30 years, rising interest rates may cause the value of the Fund's investments to decline significantly.
